CONTRACT RULE

No stage advances on model performance alone. A workflow advances only when its next operating obligation is satisfied.

FRAME

Changed work, user, owner, baseline, constraints, and value hypothesis.

EXIT

A workflow problem - not an AI feature request.

PROVE

Smallest end-to-end implementation testing context, tools, behavior, fit, and usefulness.

EXIT

A representative user completes meaningful work.

BOUND

Permissions, approvals, escalation, refusal, evaluation, versioning, cost, latency, and risk.

EXIT

Allowed, prohibited, and held actions are explicit.

EMBED

Identity, APIs, workflow systems, logging, observability, CI/CD, support, and cadence.

EXIT

Capability works inside the real workflow.

TRANSFER

Runbook, training, ownership, architecture record, reusable assets, backlog, and review.

EXIT

The client can operate and improve it.

DEPLOYMENT POSTURE DIMENSIONS

Business outcome

Decision or task changed; baseline and value evidence defined.

Quality and reliability

Representative cases, failure categories, repeated-run behavior, and regression evidence.

Human authority

Approval, escalation, reversibility, and consequential-action boundaries.

Economics and latency

Cost per completed workflow and response time appropriate to the work.

Operability

Logging, diagnosis, recovery, support, and version visibility.

Transfer and reuse

Named client owner, documentation, training, independent change, and reusable assets.

RELEASE POSTURES

Assist inside workflow

Human acts; AI retrieves, organizes, summarizes, or drafts.

Recommend, human decides

AI synthesizes evidence but final authority remains human.

Execute with approval

System prepares or initiates consequential work only after explicit approval.

Bounded autonomous execution

Low-consequence, stable, permission-limited action with monitoring and fallback.

Hold for redesign

Consequence, uncertainty, ownership, or evidence does not support release.

TRANSFER STANDARD

The client team can operate, evaluate, diagnose, and improve the workflow - and Deloitte retains a reusable pattern or asset.
